

Kevan Simpson

Veteran software engineer with extensive experience building enterprise applications, frameworks, and infrastructure. Develops in a myriad of languages and architecture with a demonstrated ability to pick up new ones on the fly. Articulate communicator with effective writing skills, presentation experience, and values kindness, empathy, and respect.

RECENT WORK EXPERIENCE

Apex Fintech Solutions — *Senior Software Engineer*

JANUARY 2025 - PRESENT

- Develop trading platform focusing on trade execution, responsible for 30+ Java microservices in GCP Kubernetes with Kafka and Terraform
- Increased team sprint velocity by over 20% by story points
- Migrate services to new promotion framework + update Kubernetes manifests and rewrite Python deployment script

[Bluecrew](#) — *Software Development Engineer*

OCTOBER 2023 - MAY 2024

- Lead engineer on Timestamp Audit Trail, creating new Kotlin Spring Boot endpoint to integrate with timekeeping and legacy endpoints to provide timestamp edit history + extensive React changes to match Figma diagrams
- Refactor internal React payroll portal to new AWS Cognito pool using Kotlin Spring Boot proxy endpoint across two legacy services and SplitIO to manage migration from legacy pools
- Enhance core platform and applications (Node/React/Angular) for customers + on-call rotations

[eBay](#) — *Master Technical Skills Software Engineer*

MAY 2020 - MAY 2023

- Responsible for framework to deliver recommendations across the site, including two Kotlin Spring Boot microservices + nine Kotlin libraries across four Git repositories to maximize reuse.
 - Marshmallow, a configuration-driven orchestration application, replacing legacy Merch monolith with ~80% feature parity and comparable latency at MVP launch
 - Smores, a data service offering composable configuration to both legacy monolith and Marshmallow via REST + Nudata Monstor (NoSQL) document storage
 - Includes open source API for all aspects of Merch orchestration: configuration resolution, listing hydration, algorithm analysis, post processing, tracking, and configuration-driven Dynamic Item Cards
- Feature enhancements, bug fixes, and production support for Java Spring legacy Merch Front End application

PROJECTS

[spring-executor-starter](#)

- Spring Boot autoconfiguration to define [AsyncTaskExecutor](#) beans in application config

EDUCATION

- B.S. Cognitive Science, Specialization: Computing, UCLA
- Sun Certified Java Programmer, 2002

SKILLS

Languages: Java, Kotlin, Typescript + NodeJS, Scala, Python, Golang, Ruby, Perl

Frameworks: Spring + Spring Boot, Apache [Kafka, Camel, ActiveMQ], Guice, Terraform, Tilt, Docker, React/Angular, Protobuf, Git, Maven, Bazel, Agile

Testing (Java): JUnit 4/5, Mockito

Testing (JS): Mocha, Jest, Karma

Databases: MongoDB, *SQL, Redis

Architectures: Microservices, Web services + applications, Enterprise Service Bus (ESB), Rich Client

Infrastructures: AWS [EC2, Lambda, CDK, Cognito, S3, SQS, SNS], GCP [CloudSQL, gRPC, IAM, Datastream], Kubernetes, on-premise, data center

WORK EXPERIENCE (cont.)

[Azlo](#) — *Full Stack Engineer*

APRIL 2019 - MAY 2020

Develop Typescript services utilizing MongoDB and K8s managed by Gitlab CI. Extract legacy Verifications into new service. Create configurable ETL service with MongoDB Watcher API to stream data to AWS S3/Kafka/local file system). Implement Optimizely integration from POC to production-ready Typescript module + migrating feature flags for 10+ services.

[USBank](#) — *Java Developer (QA)*

DECEMBER 2018 - FEBRUARY 2019

Create test harness for KYC application, port code from JMeter BeanShell scripts, and simplify creation of test POJOs

[Finity Communications](#) — *Senior Software Engineer*

DECEMBER 2017 - OCTOBER 2018

Assist implementation of ETL application using MapForce EDI and Apache Nifi, then reimplement with Spring Boot + Camel. Develop anonymizing application to redact PHI following Safe Harbor method, pulling from AWS S3/local FS.

[iovation](#) — *Senior Software Engineer*

OCTOBER 2015 - AUGUST 2017

Guide full reconfiguration of ActiveMQ brokers with failover, load balancing, & optimized Camel routes + mentor SRE. Develop ML fraud scoring project as part of cross-functional team. Refactor legacy libraries to Spring Boot autoconfiguration. Design POC to deploy application stack in Kubernetes cluster via Netflix/Spring Cloud stack.

[Online Business Systems \(OBS\)](#) — *Software Engineer*

NOVEMBER 2012 - OCTOBER 2015

Implement ESB with failover & installation script via JBoss Fuse for local government to connect RMS, CAD, Jail Management, and Property systems. Create customized reports via XSL + Apache FOP.

[DealerTrack](#) — *Software Engineer*

MARCH 2012 - OCTOBER 2012

Develop web application to search for and finance vehicles to purchase. Implement feed mediator to geolocate dealers.

[Nike](#) — *Application Engineer*

AUGUST 2011 - NOVEMBER 2011

Engineer event notification system via JMS/JBoss. Create a reusable servlet component to integrate with the system.

[Moda Health](#) — *Web Developer*

MAY 2010 - AUGUST 2011

Engineer + support for 8 web/batch applications using JSF/Spring/Hibernate. Promote build automation by setting up a Maven repository. Develop core libraries and install team wiki to create and document a standardized tech stack.

[Sun Microsystems](#) — *Senior Software Engineer*

SEPTEMBER 2004 - FEBRUARY 2010

Lead for XSLT Service Engine, which deploys XSL stylesheets as web services. Implement stackable Java libraries to facilitate building JBI components, including redelivery, throttling, and JMX configuration management. Assist development of persistence/recovery for BPEL Service Engine. Co-lead for Java Collaboration Editor, a web service UI.

[Safeway](#) — *Application Associate/Enterprise Architect*

MAY 2000 - SEPTEMBER 2004

Inaugural member of Reusable Software Group developing custom SOA framework, common libraries, and mentoring teams across build sites. Lead on Demand Aggregation, an enterprise forecasting application integrating with legacy mainframe systems, batch processes, and web services (ROI: \$10b / 6yr). Designated as Advanced Java Product Usage Expert (company-wide recognition).
