

SUMMARY

Veteran software engineer with extensive experience building enterprise applications, frameworks, and infrastructure. Developed in a myriad of languages and architectures with a demonstrated ability to pick up new ones on the fly. Articulate communicator with effective writing skills, presentation experience, and values kindness, empathy, and respect.

RECENT WORK EXPERIENCE

- Software Development Engineer

- [BlueCrew](#), Portland, OR; October 2023 - May 2024

- Lead engineer on Timestamp Audit Trail, creating new Kotlin/Spring Boot endpoint to integrate with timekeeping and legacy endpoints to provide timestamp edit history + extensive React changes to match Figma diagrams
- Refactor internal React payroll portal to new AWS Cognito pool using Kotlin/Spring Boot proxy endpoint across two legacy services and SplitIO to manage migration from legacy Cognito pools
- Enhance core platform and applications (Node/React/Angular) for customers + on-call rotations

- Master Technical Skills - Software Engineer

- [eBay](#), Portland, OR; May 2020 - May 2023

- Responsible for framework to deliver recommendations across the site, including two Kotlin/Spring Boot microservices and nine Kotlin libraries across four Git repositories for maximum reuse
 - Lead engineer on Marshmallow, a configuration-driven, orchestration Spring Boot application, replacing legacy Merch application with ~80% feature parity at MVP launch
 - Developed Smores application, providing composable configuration to both legacy and new Merch applications via REST and Nudata Monstor (NoSQL) document storage
 - Includes open source API for all aspects of recommendation orchestration: configuration resolution, listing hydration, algorithm analysis, post processing, tracking, and configuration-driven Dynamic Item Cards
- Feature enhancements, bug fixes, and production support for Java/Spring legacy Merch Front End application

Full Stack Engineer

- [Azlo](#), Portland, OR; April 2019 - May 2020

- Develop NodeJS/Typescript microservices in support of fee-free banking for small businesses utilizing Mongo collections, deployments in Kubernetes, and managed by Gitlab CI
 - Extract legacy Verifications collection into new service
 - Configurable ETL service using MongoDB Watcher API to stream data to pluggable outputs (AWS S3, Kafka, local file system) for Data Science Team
- Implement Optimizely integration from POC to production-ready Typescript module + migrating feature flags for 10+ services

PROJECTS

[spring-executor-starter](#)

- Spring Boot autoconfiguration to define [AsyncTaskExecutor](#) beans in application config

Advent of Code repositories ([AoC](#)):

[Java](#) [Kotlin](#) [Node](#) [Golang](#) [Scala](#)

EDUCATION

- B.S. Cognitive Science, Specialization: Computing, UCLA
- Sun Certified Java Programmer, 2002

SKILLS

Languages: Java, Kotlin, Typescript

Frameworks: Spring, Spring Boot, Apache [Camel, ActiveMQ, FOP]

Databases: MongoDB, *SQL, DB2

Architectures: Microservices, ESB,

Web services/applications, Rich Client

Infrastructure: AWS [EC2, Lambda, S3, CDK, Cognito], Kubernetes, Terraform

WORK HISTORY (continued)

- Java Developer

- [USBank](#), 12/2018 - 02/2019

- Senior Software Engineer

- [Finity Communications](#), 12/2017 - 10/2018

- Senior Software Engineer

- [iovation](#), 10/2015 - 08/2017

- Software Engineer

- [OBS](#), 11/2012 - 10/2015

- Software Engineer

- [DealerTrack](#), 03/2012 - 10/2012

- Application Engineer

- [Nike](#), 08/2011 - 11/2011

- Web Developer

- [Moda Health](#), 05/2010 - 08/2011

- Senior Software Engineer

- [Sun Microsystems](#), 09/2004 - 02/2010

- Enterprise Architect / Application Associate

- [Safeway](#), 05/2000 - 09/2004
